More info:
Quote:Some Managers, such as the HIView Manager (a superset of the Control Manager), are implemented in C++, but Carbon remains a C API.

Also, some crazy ideas...
 1. to put #ifdef checking if class/object had derived from HIObject and neutralize Upp new overriding.. ?
maybe less crazy - 2. just block Upp code "travelling" into apple side? But how to separate? ... see 1 - above.
