Ok,

I have finished with tabbing and more flexible docking mechanism.

Remain to finish:
1. to Make nested docking for left, top, right, bottom docking, not only tabbed nested docking;
2. To make possibility for tabbing nested tabs not only bottom (left, top and right).
3. to Save and restore settings;
4. TO finish with highlight effect. (optional).
5. to optimize the code.

I will share the code when the code will be finished.
