Quote:I'm not fan of so many colors Smile You would like to color those tabs automatically (then what is the algorithm - different file extension - different color?) or have possibility to set the color individually?

In firefox I'm using auto random coloring, although you can also assign manually. For me it works, I don't use those colors to recognize particular tab, just it makes easy to distinguish tabs and relax my eyes. With the number of source files I'm using it would be almost impossible to orientate by custom colors, and it would be tedious to assign them. (just checked my current project has 134 files already in IDE)
