IMO this feature almost completely replaces the need of code folding. Because finally folding is just a way of making function declarations more visible. We make the same thing without need of user manually collapsing new functions, we just collapse all the code and expand it back for him with only one click.

I disagree. The purpose of code folding is to hide blocks of code, not whole functions. I think there are a lot more important things to do than code folding though, like improving code navigation and the help mechanisms.
