fudadmin wrote on Thu, 27 January 2011 10:12: First of, a bit of topic, all what if name all upp technologies with the prefix "the"? or "upp" if we have TheIde, then we should have TheRainbow, TheChameleon etc. This should help when searching the net?

But one idea for the rainbow is:

"what if get rid off using native windows for upp ctrls and would just use them as clickable images/regions?"

My guess is that mac os x uses this approach.

Not sure if I understand the question correctly, but if yes, then the answer is the:

We already did. It was always this way in U++...

(There is an exception, "DHCtrl", but that is only because some APIs require native widget windows, e.g. OpenGL).
