You guess wrong, I'm just a regular user

You deserve to have admin rights, I think.

I'm not sure what are the possibilities of this forum, but I think that it doesn't have any of the advanced security options you are talking about... It is rather old engine (2006), back than spam probably wasn't so much of a problem

The new versions of FUDForum do have the means to fight spammers, so maybe it is time to upgrade The fudforum wiki says that upgrade from 2.x to 3.0 should work just fine.

Honza

Can someone with domain root privileges upgrade the forum?
Also, off topic but message indexing needs to be done, I think on a regular basis because forum searching is not working properly.
EDIT: I could press the buttons myself but I dont know how long it would put the forum off-line and what to do if something goes wrong. I used to do that long time ago when I had root access.
