Yes, it would be nice. Surely it can be done in Windows with MinGW.

Good, maybe I will try it.
I now have MinGW-gcc440_1

I have just spent about 10 hours trying to get something to work following their outdated instructions with EclipseCDT on Win XP, I have a thread on their forum to get some updated instructions or help.

Eclipse is great for Java but over the years have tried it for C++ but never liked it.

Eventually what I would like to do is <http://osgearth.org/> which is similar and may have been influenced by NASA WW in C#

edit: The pre-built dependencies, all of the basics, for Win 32 and 64bit is a 21.2 MB .zip

Neil
