 if(activate) {
  if(!this->IsPopUp())
   topwindow->SetWndForeground();
  else
   focusCtrl->SetWndForeground();
 }
the previous
if(activate)
    topctrl->SetWndForeground();
causes flickering of the window frame, shadows and titlebar.
Sorry once again. I rushed. The above causes menu disappear when trying to select. I will try to investigate deeper - I need to understand more of the logic here. At least now I can work faster because I have ultimate++ theide quite useable in osx11.
