
Subject: Re: [BUG?] X11 (at least OSX) Menus displayed under TopWindow,
owner=RootWindow

[View Forum Message](#) <> [Reply to Message](#)

```
if(activate && !topctrl->IsPopUp())
    topwindow->SetWndForeground();
```

no more flickering and menus works well!

Bet I feel (tried a bit...) that now it is possible to optimize (do not use redundant focus change in some cases in the code below that line:

```
focusCtrl = _this;
focusCtrlWnd = topwindow;
DoKillFocus(pfocusCtrl, _this);
LLOG("SetFocus 2 - after DoKillFocus");
DoDeactivate(pfocusCtrl, _this);
DoSetFocus(pfocusCtrl, _this, activate);
if(topwindow)
    lastActiveWnd = topwindow;
return true;
```
