I managed to get some basic IPv6 support working. Socket and HttpClient seems to work fine. I kept the API the same, but I changed in Socket::Data:

```
bool          Open(bool is_blocking, int family = PF_INET);
```

Also, OpenClient has a parameter "dword \*my\_addr". If you supply an IPv6 address a dword is no longer sufficient storage.

I'll do some more tests and prepare a patch.
