Subject: Re: [BUG?] X11 (at least OSX) Menus displayed under TopWindow,  
owner=RootWindow

ok, semi-blind fix. I do not know which cases or intentions should be covered with  
SetWndForeground.. It looks working well on osx11:

```
focusCtrl = _this;  
focusCtrlWnd = topwindow;  
DoKillFocus(pfocusCtrl, _this);  
LLOG("SetFocus 2 - after DoKillFocus");  
DoDeactivate(pfocusCtrl, _this);  
if( !topctrl->IsPopUp() )  
    _this->SetWndForeground();  
DoSetFocus(pfocusCtrl, _this, activate);  
if(topwindow)  
    lastActiveWnd = topwindow;  
return true;
```

I just thought that there's no good logic to put ->SetWndForeground before DoDeactivate.  
also, I removed if(activate) because that prevented Assist popup getting focus and wheel was not  
working.
