
Subject: private-ness of ToolButton::GetImage()

Hi,

I wanted to create a new type of toolbutton, with a button and a droplist icon next to it. Clicking the button will execute the default action, while clicking the droplist-icon will present a droplist.

While overriding the ToolButton I've encountered that 'UPP::Image GetImage() const;' is declared private.

As I've to get the size of the image in my derived class I need this to be at least protected. Is there any rationale this has been declared private?

Best regards,

Martin
