Hello,

Google announced GSoC 2011 program so i think we need to start thinking at it. I would like to apply for same application from last year - KDE port of U++.

IMO would be good if we would have (*as a choice*, because i know U++ is mainly statically linked):

- U++ as a library - lib files for simple linkage from other IDE's and dll/so to make it easier to write plugins which use U++.
- Selecting theme engine at runtime - a .so file which provide theming for KDE and another for Gnome - part of that will be solved by my GSoC application - if user doesn't have any DM based on gtk/qt then U++ style will be used.

Andrei
