koldo wrote on Wed, 09 February 2011 12:44 Yes, although it is a pity to use a new class and losing .usc representation for layout file (or having to create a new that is really a copy of EditString, EditInt, and so on...)  
Usc supports templates, so you don't have to lose anything Example can be found in CtrlLib.usc, look for WithDropChoice.

Anyway, I agree that it is unnecessary in this case and that it is much more elegant to use WhenEnter and ChildLostFocus (which is great idea which never occurred to me before Mirek mentioned it ).
