Hi everybody,

I submit here a new version of the advanced LineEditCtrl.

How to do:
Push ALT key, and press left mouse button, move mouse anywhere and leave mouse button.

I don't get select implementation as i want for the moment. It just marks a block very well with a caret at the end.

At line number 679 of AdvLineEdit.cpp, i must add function to select words into the block AND SO activate all menu of contextual bar.

Do someone have an idea!!

The main problem is to keep selected words that will activate bar functions (Copy CTRL+C, CUT CTRL+X, ...):
- what variable is used to keep selected words
- what variable I must swich on (boolean?)

Thanks,

Ratah
