Hm, actually, I might not have noticed before (well, at 3.2Ghz it is not quite noticeable), but it looks to me that at the start there is quite a long "Indexing topic" phase.

I guess before opening Pandora's box, we should simply try to optimize that out. In fact, if I remember well, I was considering this some time ago, I believe that the issue there is simply that caching mechanism of topic indexing is suboptimal... but then again, it was minor issue to wait 3 seconds at the start of the ide so far...
