Hi Ion,

Well, why not I know that the sockets are not ideal and actually I was thinking about rewriting this as well. My idea was to use DBus, as it is more or less standard solution these days and can be used to interact with other applications as well... Or maybe the DBus could be completely separate package. Also, if I am not mistaken, the most common DBus server implementation uses named pipes for communication as well.

But back to the topic: If you wish so and have the time, you can modify this package as you want. I didn't have time to develop this for very long time and didn't even need to use it, so I'll be more than happy if someone improves it

Honza
