Hello Mirek

For the question it could be used:

```
SQL.Execute("select *, [Name] || ' ' || [Surname] || ' ' || [Location] as FULLDATA from PERSONAS  
where FULLDATA like '%" + pin1 + "%' and FULLDATA like '%" + pin2 + "%");
```

The ' ' is just to avoid that "aryPop" would match with register MaryPoppinsBruxelles.

Is it possible to do this and use ALIAS with SqlExp or it has to be done with plain SQL?
