Subject: SQL Insert Statement without a value[SOLVED]
Posted by Justin on Mon, 08 May 2006 21:17:23 GMT

Hi Guys,

I am trying the following insert command and it is working. However, this command does not work if the fields are empty. Is there a simple way for this to work without having to validate each field and create some type of NULL value?

```
 sql*Insert(NC_SUPPORT)("name", ~supportform.edtName)("company",
~supportform.edtCompany)
    ("email", ~supportform.edtEmail)("status", ~supportform.lstStatus)
    ("phone", ~supportform.edtPhone)("country", ~supportform.lstCountry)
    ("product", ~supportform.lstProduct)("units", ~supportform.edtUnits);
```
