Ok,

Now, the ZMQ library in U++ can be compiled under POSIX (tested on Ubuntu 10.10 32bit) and win32 (tested on windows XP SP3).

The latest version can be found in the svn repository (in bazaar folder).

If somebody is interested of testing and using this library I'm open for discussion.

In the near future I will integrate this library in my projects and try to write a little documentation of the ZMQ classes and methods.
