trader wrote on Sat, 12 March 2011 18:43It seems that the main function of U++ is for GUI applications. In Console applications have some difference, using C++ or U++?

Hi John,

There is a lot of things that console programmer can benefit from in U++. To name just a few:

- Very efficient containers

- Fast memory allocator

- Ready to use classes for many areas like sockets, compression, graphics (yes, even in console apps you can work with images)

Plus U++ makes it very easy to add GUI to existing command line apps in later stages of development (which proved to be very helpful for me quite a few times ).

Best regards,

Honza
