got a problem with the public git from Download section.

it's got common history only up to rev 327,
means revisions 328 and further differ in hash.

can see it in my git repo

<http://gitorious.org/upp/upp/commits/master?page=99>

to compare:

<http://gitorious.org/upp-mirror/upp-mirror/commits/master?page=99>

take a look at the commit: the one from upp-mirror 'Adding uppdev..'

has a proper creation date from 2008, while my checkout from current svn claims it to be march 20, 2010..

since git is considering the timestamp part of file (exact), the hashes differ..

is there a possibility to correct this in svn?

cheers..
