Lance wrote on Mon, 14 March 2011 01:07I need to keep track of the edit status of the current row in a ArrayCtrl. I connected a callback to its WhenUpdateRow event.

```
void TransactionCtrl::TransactionUpdateRow()
{

 int i;
 if(trans.IsCursor() )
 {
  i=trans.GetCursor();
  msgs.Insert(-1, String().Cat()<<"Cursor at "<<i<<"\n");
 }else
  return;
 if( trans.IsModified(i))
 {
  changed=true;
  msgs.Insert(-1, "MODIFIED - IN Update Row\n");
 }
}
```

It never worked as I had expected.

Lance

Well, I know for sure it works. So I guess something else is wrong; hard to say without seeing more of your code.
