On the on where the Java menu compared to U++ it shows on the Java, that certain items are selected. This is also something you can do in microsoft visual basic.

Can this be done in U++, and how do you do that if possible.

Also on lots of windows programs you have hot keys for menu items, such as cntl+p to print, or cntl+C to close. Can you do that in U++ and how do you that. Examples would be nice. Also some items use an F key such as F3, in addition to the cntl+C type of hot keys for menu items. Can this be done as well. and if yes, an example would be great.
