silverx wrote on Thu, 24 March 2011 17:53Can this be done in U++, and how do you do that if possible.

Also on lots of windows programs you have hot keys for menu items,

They can be done in Upp
  bar.Add("m meters", THISBACK(Setm)).Check(mX);
  bar.Add("km kilometers", THISBACK(Setkm)).Check(kmX);

You have bool mX, kmX, etc
In your code you make one true and the rest false.

You can have hot keys. I have not used them because I want the apps to be able to run on a slate computer without a keyboard using the touch screen in the easiest way.

I had great help on this thread, if what you are looking for is not here try the examples, tutorial, reference and bazaar.
