Hello Daniel and all

Thank you for your answers.

About Toolbar, the trick is in function RebuildToolBar(). So, the code in callback could be:

```
grid.Appending(visible).Duplicating(visible).Removing(visible);  
grid.RebuildToolBar();
```

About WhenRemovedRow()... it does not serve as it is a Callback and should be a Gate, I mean, if user clicks Del to remove a row, it would be called to validate or not the deletion so it would have to return some bool.

Any ideas?
