Yes, there is
There is WhenCtrlAction and WhenCtrlsAction. First is called for every embedded control if there was leftdown righdown or mousewheel action. Second is called for every kind of action for controls that where created automatically for column (by for example using Option() method). You can use it like this:

grid.WhenCtrlsAction = THISBACK(ShowCtrlValue);

void ShowCtrlValue()
{
    PromptOK(AsString(grid.Get()));
}
