
Subject: Re: TabBar crash fix (very crude one, needs author to rewrite it)

TabBar.cpp:1930 :

```
if (!CancelClose(v) && !CancelCloseSome(Vector<Value>(vv, 0))) {  
    Close(ix);  
    WhenClose(v);  
    WhenCloseSome(vv);  
}
```

(and line 1973)

Shouldn't the WhenClose callbacks be called BEFORE closing the actual tab? Can somebody more experienced with tabs and callbacks check if it's correct now? Doesn't make sense to me, but I never used it, so maybe I'm just missing something obvious.
