as of the SQL stuff. i think at this point, the data has been already analyzed and can continue to be dealt with as int, isnt it?

No. Consider:

Sql sql;
sql * Select(NUMBER).From(TABLE);
sql.Fetch();
int x = sql[NUMBER];

At the line of assignement to 'x', at compile phase nothing is known about what data type DB returned - was it 'int' or 'double' or 'int64'?
