Hi,

I didn't find any documentation about .usc files... Just some questions about it in this forum, but it's not very helpfull...

A lot of personal controls (even more "official" ones in bazaar, like SliderCtrlX by koldo) don't have any .usc file, and we cannot use them with layout editor...

How can I write .usc files ? I think I understand a little how it works, but there is still too much mysteries for me to be able to do this !
