Quote:
When I first met U++ I was scared about the way things were done, and also because of theide appearance.... and I lost almost 1 year before going back to it, after trying some other libraries and IDEs.

Now I think it's the best toolkit around. Up to now, the only (really few) things I was missing I could easily develop by myself with help of this forum which is, IMHO, one of the best support forums I ever met.

So, what to say ? Popularity of U++ ? Well, pity for people that don't use it Smile

Max

I also registered in 2007 (the year you registered), but I wasted some more years! Completely agree with you. For c++ programmers, U++ library IS the best. IDE-wise, TheIDE might be less powerful than VC++ etc(which has the best code completion), but it's already very usable and is getting better by week (if not by day). With the little attention and resource U++ received, it's a miracle.

Question is: why is U++ not getting enough attention and users?
