Subject: BUG? DropList shows first of entries with same key

hi
a DropList with such entries

 dl.Add(100, "Apple");
 dl.Add(100, "Cherry");
 dl.Add(101, "Pear");
 dl.Add(100, "Berry");

will always show 'Apple' even if Cherry or Berry are selected.
it's due to Sync() method which key.Find()'s the value of the first entry only..(typical Map/Index behaviour).

it'd be great to be able to select the entries independantly, even if they got the same key..

is that possible somehow?
