Mindtraveller wrote on Thu, 28 April 2011 21:09UPDATE: It looks like I've found the cause. In Makefile I manually change CXX from "c++" to "g++46". Building with "c++" is incremental, while Makefile with "g++46" rebuilds from the scratch. Investigation continues...

and what do the commands "make CXX=g++46" and "CXX=g++46 make" give with the original Makefile? Maybe also try with 'gmake' instead of 'make' to verify GNUisms...
