It seems OpenOffice hide the font substitution from end user. Here is the result of my experiment in Ubuntu + Open Office. See the hilighted character is related with nominal font "FreeSerif"

Let me know if I can somehow find the actual font used.

Regardless what font (serif, sans, etc), gedit/open office will render Chinese characters at uniform size and space, so the Upp way of interpret non-western font may have flaw. Interesting enough, on Windows, the characters almost always get displayed albeit with size/placement issues, while on Ubuntu, some characters cannot be displayed and become blanks.
