kohait00 wrote on Wed, 04 May 2011 04:46hi all,

i'm wondering why

```
template <class T> bool IsNull(const T& x) { return x.IsNullInstance(); }
```

and not

```
template <class T> bool IsNull(const T& x) { return x.IsNull(); }
```

is there a reason for it? name clashes??

You would not be able to use "IsNull" for other objects in any of T methods, without using 'Upp::'
prefix -> very annoying...
