forlano wrote on Sun, 14 May 2006 13:34Hello,

I've a file in a LineEdit widget and I desire to send it to the Printer. I've found with Assist the Print() function but it seems to work with RichText while I've a simple text file. So I wonder if it works or there is a U++ Print method that can do the job. (At the moment I've not a printer so I cannot test if the Print() method RichTest based works in my case).

BTW, this question is more general because in principle I could want to print a text file bypassing any widget and sending it directly to the printer.

Thank you,

Luigi

PS: The class RichEdit has the Print() method, why LineEdit has not the same?

There is no direct support for printing of LineEdit.

The simplest way to print is to use Report. Simply, instead to sending your stuff to "Draw", you use Report (which implements Draw interface), just add some calls to perform pagination. Alternatively, use Qtf, which you can send to Report as well.
