Is there a way to keep the layer tree visible as long as the mouse is over it.

A user could click to enable 1L then 1R, 2L and 2R without chasing down the layer tree again.

This is for the U.S. FAA Charts. The merged set is one click but for the charts with the full text borders they are set up in a checkerboard layout, hence the 1L, 1R, 2L and 2R.

Upp has been working great for my apps.

Neil
