Hi,

The problem is that it wants also to delete a lot of files in "out", "tmp" and "bazaar" directories...

Maybe Ok with "tmp", but I'm afraid about bazaar : why so many files are deleted ? I'm surprised that we don't need anymore them at all... ie, it wants to delete files in bazaar/CtrlPropTest and bazaar/TabBar directories...

And as it deletes all in out directory, I'll have to recompile all my apps, with all libraries ?

I just choose to install local copy of upp... Did I do something wrong ? Why must I move MyApps when the installator put it there ? Is there other folders that I should move ?

(sorry for these newbie questions... I'm still just discovering U++)
