Subject: Re: Eigen and UPP? (STL question?)
Posted by GaroRobe on Fri, 13 May 2011 11:18:48 GMT

It worked, but... hey, what did it do?

I mean... what does "NAMESPACE_UPP" means and why can't I define similar template for std::stringstream& instead of MatrixXd&?

Well, anyway I'll have to do some serious learning on strings, values and containers in U++ (reading once obviously just wasn't enough)

Seems like I'll have quite a number of questions along the way
