I can't figure out how it can be done in Upp.

In Java

// This makes the menu item on a list

```
clearMenuItem = new JRadioButtonMenuItem("Clear");
clearCtrl.add(clearMenuItem);
```

// This concerns the action taken when clicked.

// If these lines are not included then there is just a line of text ("Clear")

```
clearMenuItem.addActionListener(new java.awt.event.ActionListener() {
    public void actionPerformed(java.awt.event.ActionEvent evt) {
        try {
            ConnSock.sock("clear96");
        } catch (IOException e1) {}
    }
});
```

This is what I am trying to do in Upp.

Just informative lines of text with no action, THISBACK, or Callback.

Maybe overloading bar.Add() to accept just one argument, the text, without the THISBACK.
