nlneilson wrote on Tue, 17 May 2011 10:47Looks good.

I couldn't find the Py/install.txt.
I have Python 3.2 r32:88445 installed.

When trying to run from theIDE I get this error massage.
c:\myapps\boostpytest\world.h(4) : fatal error C1083: Cannot open include file: 'Py/Py.h': No such
fi
 le or directory
c:\myapps\boostpytest\BoostPyTest.h(4) : fatal error C1083: Cannot open include file:
'PyConsoleCtrl/
 PyConsoleCtrl.h': No such file or directory

obviously there is something wrong with your upp installation. bazaar/Py/install.txt has to be there.
please double check your installation. can you build any other bazaar application?
the instructions in install.txt should yield a working Py environment
