A question on that is can I pull up a text file into that new window?

Yes, just add appropriate Ctrl for this window and access it from main window.

```
App::App()
```

```
{
```

```
//..
```

```
String data = LoadFile("path/to/file");
```

```
// text here is added Ctrl;
```

```
window.text.SetData(data);
```

```
}
```
