I guess this is the right place to notify this terrible news.

In all versions before the 605 series I could see on my application the character ½, it is "1/2".
I continue to see it in theIDE but in my application it is disappeared and at its place appear a stupid square! Where it is finished?
That sign was very important because it indicates the draw. Not only, but the square give problem to DeQtf() that is not able to parse it (I do not know if "1/2" could give problem to DeQtf too because I've implemented it only with 605.

Is this normal?

Luigi
