Well, as far as I can see in given example only opencv v1 was used. I use 2.2 (opencv2 API).

No fuctional yet, just exploring:

```
#include <opencv2/opencv.hpp>
#include <CtrlLib/CtrlLib.h>
using namespace Upp;

void proto1::FileOpenClick()
{
    selectDlg.ExecuteOpen();
    IplImage* img = cvLoadImage(~selectDlg);
}
```

Gives erros:

Quote:c:\upp\uppsrc\core\config.h(97) : warning C4005: '_CRT_SECURE_NO_DEPRECATED' : macro redefinition

C:\OpenCV2.2\include\opencv2\core/types_c.h(47) : see previous definition of '_CRT_SECURE_NO_DEPRECATED'

C:\MyApps\proto1\main.cpp(20) : error C2040: 'img' : 'IplImage *' differs in levels of indirection from 'Upp::Image'
