Hi!

SetCtrlValue doesn't work, because controls are not created yet. They will be created during window opening. To make it work in your case call SyncCtrls before setting control values:

```
grid.Add();
    grid.SyncCtrls();
grid.GoBegin();
for(int col = 0; col < 10; col++)
    grid.SetCtrlValue(col, "a string");
```

But the simplest and the best way is to replace SetCtrlValue with Set. In proper time controls will be automatically populated with underlying grid values;

```
grid.Add();
grid.GoBegin();
for(int col = 0; col < 10; col++)
    grid.Set(col, "a string");
```
