Subject: GetCurrentDirectory() Doesn't contain the \ is this a bug?

I am trying to use the GetCurrentDirectory() function, and when I use it, I get

C:\\upp\out\MSC9.Debug.Debug_full.Gui.Sse.

It isn't including the slashes or the underscore in the directory name.

Is this a bug? How do I get the current directory in its proper form for windows?

I am using windows vista.

Any other information that would be helpful let me know.

David
