try use upper case SQL, and use SQL instead view:

```
SQL = dbSession
```

```
SQL * Select(EMPLOYEE_ID, FIRST_NAME, LAST_NAME).From(PUNCH_VIEW);
```

```
while(SQL.Fetch(view))
```

```
{
```

```
    if(SQL[FIRST_NAME] == "John")
```

```
    {
```

```
        // add this text to a GridCtrl
```

```
    }
```

```
}
```

A better example look in HomeBuget package.
