tojocky wrote on Thu, 02 June 2011 10:17Very interesting,

But I am a little confused. What library is better to use for 2d and 3d acceleration.

From practice can somebody tell what to recommend?

Hello Ion

I do not understand you. OpenCV is used for image processing.

You open images or real time video and process it, extracting the info you want.

It also accepts stereo images and lets you calibrate the camera and spatially position picture elements as in photogrametry.
