Hello Neil

It's good you got it to compile in MSC. More than that. It only links with MSC.

By "Package organizer" are you referring to the .upp file? In Project/Package organizer menu or by right clicking the package in the left vertical window you have the compiling and linking options and libraries. All those settings are saved in .upp file .

About command line management, just use `U++ CommandLine()` and remove all references to `argc` and `argv[]`. It is documented and works very well.
