As a newbie I'd like add my thoughts.

I've been programming for 40 years now (I'm now retired). I was looking for a RAD like toolkit for a project that has personal interest for me and that I now have time to do. U++ fits the bill perfectly, more documentation would be useful and IMO would gain more users. From what I've seen the help on the forum is excellent but some people don't like to ask for help, they prefer to use the documentation, when people like this see that all they need is not documented they will look elsewhere.

I agree with you but I think it's even more important to have a proper help infrastructure so if you have some time on your hands you could have a look at the "advanced T++ help system" proposal here
http://www.ultimatepp.org/gsoc$uppweb$ideas2011$en-us.html

I'm still keen to do this myself if things ever settle down for me coz it should be fun, but anyone else is welcome to.

Graeme
